PING ERROR TEST

Explain proper scenario for following ping errors ?

Destination host unreachable

It is ping error. When we ping ip the system checks the route for destination ip in the system route table. If the route not present in the route table it drops the echo data. It is known as destination host unreachable.

Request timed out

When two system connected in between router is connected. In packet flow ping ip the system checks the route for destination ip in the system route table. If the route present in one table it will send the data to router and target system not able to send data due to Reply from some ip destination host unreachable route not present in route table.

In packet flow for two PC's. When ping IP in the system it checks the route for destination ip in system route table. If the route present data moved to router and router checks the destination ip in routing table if the destination ip's network id not present it will leads to Reply from <source ip> destination host unreachable

TTL expired

A "TTL expired in transit" message means a data packet ran out of its "Time to live" (hop limit) before reaching its destination.
