1, Explain uses of ping command in network ? ^{know if}

Ping command is used ^{to} the network is connected through a echo data shared with targeted ip and receive respond the same data without any loss.
cmd: Ping <ip>

2, Explain netbios protocol ?

Netbios protocol is request the target ip by its Computer name do the same as ping <ip> but with the computer name. Netbios convert computer name to target ip for network.

3, Explain SMB protocol ? ^{server}

SMB stands for ~~short~~ Message Block Protocol is Primary network file sharing protocol used for sharing files, printers and other resources across a network.

4, Explain ping process from 50.0.0.10 to 50.0.0.20 ?

If the two system assigned with IP's of 50.0.0.10 & 50.0.0.20. First we have to verify if both ip's are configured by Command called ipconfig. It will show the config ip details. Now, we have to know the both systems are connected with each other. So, here we use command called ping. If we wants to know the second system connected with first then type cmd: ping 50.0.0.20. and to know the second system connected with first, then type cmd: ping 50.0.0.10 on second system.
